TECHNICAL PROJECTS

PITS - *Github | Demo*
PITS is an app intended to help users keep track of their plant's watering schedules.
- Utilized **JWT** and **localStorage** to store user and plant information client-side for a quick render.
- Implemented **Redux-Thunk** to manage state across the site.
- Applied **hooks** across most components effectively making most **components functional** instead of class-based.
- Specified cache in service worker in order to make the app a **PWA**.

Flatbook - *Github | Demo*
Flatbook is a task manager application that keeps track of the user's notes
- Utilized **JSON Web Tokens** and **localStorage** to store **encrypted user information** client-side.
- Studied and implemented **Redux** to manage user's data.
- Employed **Semantic UI** for pre-styled components.
- Created a **Rails** backend to manage user's notes across multiple sessions.

New Tetris - *Github | Demo*
New Tetris is a game application that adds a new twist to a classic game
- Implemented **Vanilla Javascript** in order to **manipulate the DOM** for the game **UI**.
- Employed a **Rails API** to keep track of the user's name and scores.
- Administered **custom CSS** to web page for consistent styling on **HTML** elements .
- Broke down game logic into manageable parts and coordinated tasks with partners.
